

Ojai Pixie Tangerine

- Ojai Pixie Tangerines are only grown on 52 small family farms in one place in the entire world – the Ojai Valley in Southern California!
- They do well there because they have hot, dry summers and mild winters.
- Pixie Tangerines are pale orange colored, juicy, sweet and seedless. They have pebbly or smooth skin and are easy to peel.
- The tangerines ripen in March and are available until the end of May.
- The city of Ojai loves them so much that they have deemed April “Pixie Tangerine” month and the fruit even has their own website and social media pages!
