

## **Heating Instructions for Tony's Galaxy 4" Round Cheese Pizza**

Store pizza in the freezer until ready to heat and eat.

- **Oven**: Preheat your oven to 400 degrees. Leave the pizza in the wrapper and place it on a baking sheet. Heat frozen pizza 26-28 minutes. Times and temperatures may be a little different for different ovens.
- **Microwave**: Remove pizza from the wrapper. Place 1 pizza on a microwave safe plate in the center of the microwave. Cook pizza for 2 to 3 minutes if frozen or 1 ½ to 2 ½ minutes if refrigerated. Let the pizza sit for 30 seconds before serving. If you are cooking more than 1 pizza at a time, you may need to increase the cooking time.
